Market Monitor

Weekly review

Mon 2 Nov to Sun 8 Nov 2026 · prepared Sun 8 Nov 2026

WEEK 2 AT A GLANCE

A sharp tech sell-off, a fired pullback rule, and a lot of evidence

The S&P 500 had its worst day since 2025 on Thu 5 Nov and the **pullback rule fired**, bringing the plan's next scheduled core purchase forward. Every alert went out on time. Most of the week's build went into testing the rules, and most of them **did not show an edge**.

CHECKS ON TIME

41 / 41

Every slot within 35 seconds

CHANGES SHIPPED

40+

52 commits, including 8 backtests

S&P 500 OFF HIGH

-5.7%

F&G 22, extreme fear; VIX 25.6

SIGNALS SCORED

6 of 14

50% right so far: too early to judge

WHAT SHIPPED

What shipped this week, and why

PLAN **Trade log** with plan adherence, dip tiers and pots fill

Shows whether the plan is being followed, not just what is due. Saved in your browser only.

RESEARCH **Peer view, Entry view and Both together** (display only)

The two scoring proposals shown on every stock before they touch a verdict: 20 of 110 verdicts would change if both go in.

SCAN **Euro Stoxx 50** added: 650 companies scanned nightly

Picks are meant to tilt away from US mega-cap tech; the scan could only suggest US and UK names.

SIGNALS **Track record in detail; smart-money tags**

Track record by type, market, score band and time held. Smart money from 13F filings is display only: a five-year backtest found no edge.

FIXES **Six data bugs fixed**

UK yields 100x too small, no 1-year return for US stocks, '-1 days' results dates, stale prices, a trust topping the scan, scan-only filters on Your list.

NEW **Your core fund (VWRP) on the Dashboard**, and bear-market tags

VWRP in pounds is 6.0% off its high, about the same as the S&P in dollars. Nikkei 19 to 21% off its high is now flagged.

RELIABILITY AND HEALTH

The alert chain ran perfectly

CHECK	THIS WEEK	STATUS
Scheduled monitor slots (8 a weekday, Sunday digest)	41 of 41 ran, all within 35 seconds	Good
Nightly index scan (Mon to Fri nights)	5 of 5, plus 14 rebuilds after code changes	Good
Failed runs on main	None (two test failures on the dry-run branch, fixed before merge)	Good
Data health at the Sunday digest	OK, no problems; prices 44 hours old (weekend)	Good
Urgent alerts	Crash alert and pullback-rule alert, Thu 5 Nov 16:00 London	Fired
Data sources	Yahoo, CNN F&G and 13f.info all free and unofficial; SEC blocked without the secret	Watch

Cancelled runs in the Actions list are the chain handing over to a fresh run, by design.

AI chips led a sell-off; defensives held up

MARKETS (TO FRI 6 NOV)

- **S&P 500** -2.7% on the week, -5.7% off its 6 Oct high; -4.4% on Thu 5 Nov
- **FTSE 100** -0.5%, only 2.2% off its high
- **Nikkei 225** -11.2% on the week, 20.6% off its high on Friday (19.2% after Monday's bounce)
- **VWRP** £138.40, 6.0% off its high in pounds
- **Fear & Greed** 22 (extreme fear), a month ago 47; regime: **Pullback in an uptrend**

TRENDS AND ALERTS

- **Lagging:** AI chips -23.6% in a month, cybersecurity -14.3%, AI infrastructure -13.5%
- **Leading sectors (month):** consumer discretionary +10.5%, staples +9.6%, health care +8.9%
- **Tech sector** -17.6% in a month; only 42% of its stocks above the 200-day
- **Alerts:** crash alert and pullback rule (5 Nov); fear without a dip still active from 26 Oct
- Buy tier -10% is **4.3 points away** on the S&P 500

TRACK RECORD

Too early to judge any signal

SIGNAL	LOGGED	SCORED	READ SO FAR
Swing setup	10	3	Too early (needs 5)
Long-term good entry	3	2	AMZN +10.8% vs S&P; NVDA -6.1%
Fear without a dip	1	1	S&P -3.9% since 26 Oct
All signals	14	6	50% right way, 50% beat the S&P
Swing paper trades	145	30 closed	20% wins, -0.44R a trade, 24 stopped

Swing stays on paper: live results match the backtests (no edge). The detail views fill in by themselves as signals age; first real read in December.

What the evidence said this week

TESTED **Swing retune:** no stricter setup beats random entry after costs

Four years, 15,700 setups, eight variants. Swing stays paper only.

TESTED **Dip reserve** costs about 1% of final wealth over 10 years

15% reserve vs all-in, since 1988, on S&P, a 60/40 blend and ACWI. 10% costs about 0.7%, a 6-month drip 0.4%.

TESTED **Trim and greed alerts** do not warn of weaker markets

Years after both were better than average; harmless only as a rebalance reminder or short pause.

TESTED **Entry pillar:** momentum helps, buying 20 to 30% off the high does not

Ten years of our own data, agreeing with the literature. Proposal waits on you.

SCAN **21 good entries** among 110 fully scored stocks

Top: Micron 93 (cyclical peak risk), Nvidia 86, Lloyds 86, Schwab 84, Citi 84.

THE PLAN THIS COMING WEEK

What the agreed rules say

1. **Pullback rule: active**
   S&P 500 is 5.7% off its high, past the 5% rule, so the next scheduled core purchase comes forward.

2. **Pick tranche check**
   Each tranche needs a long-term Good entry and no results within 7 days; the Dashboard shows the check daily.

3. **Buy tiers**
   The first tier (-10%) is 4.3 points away on the S&P 500 and needs F&G at or below 25 or VIX at or above 30 to confirm.

4. **Watch: Nvidia results Tue 17 Nov**
   About 5% of VWRP and the centre of the AI chip sell-off. Not a reason to change the plan.

ISSUES AND RISKS

What could go wrong, honestly

EVIDENCE

Most tested rules show no edge

Swing, smart money, trim and greed all failed to beat simple alternatives. The plan's strength is the low-cost core and the schedule, not the signals.

SCORING

Good entries lean to banks and cyclical chips

Micron and Super Micro score highly on peak-cycle earnings. The cyclical cap would fix it, but waits on your decision.

DATA

Free, unofficial data sources

Yahoo, CNN and 13f.info can change without notice. Health checks pause signals on stale data, but a source change could still cost a day or two.

BLIND SPOT

The site cannot see your trades

The trade log lives in the browser by design, so this review cannot confirm which actions were taken.

PROCESS

This review ran late

The Sunday session finished after midnight; the data is the same, but the deck reached you on Monday.

NEXT WEEK'S BUILD PLAN

Build plan for 9 to 15 November

1. **Switch the scoring proposals, if you agree**
   Peer view and Entry view together, then recheck the 72 Good-entry bar and rerun the pick tranche check.

2. **Reword the greed and Euphoric alerts, if you agree**
   "No need to add extra money now; keep scheduled purchases going" instead of "build cash for the next dip".

3. **Test the pullback rule on VWRP itself**
   Would watching the fund in pounds fire at different times than the S&P 500 and FTSE 100? Evidence first, no change without you.

4. **Q3 13F filings (due 14 Nov)**
   First real refresh Mon 16 Nov night; check smart-money events on Tue 17 Nov.

5. **Daily spot checks and the dry-run discipline**
   Three random stocks a day against their sources; every code change dry-run on real data before main.

DECISIONS NEEDED

Decisions only you can make

DECIDE **Both scoring proposals:** switch them on together?

20 of 110 full-score verdicts change; the 72 Good-entry bar becomes harder to clear.

DECIDE **Dip reserve size:** keep 15%, go to 10%, or drip unused cash into the core?

Cost over 10 years: about 1.0 to 1.2%, 0.7% and 0.4% of final wealth.

DECIDE **Trim signal and greed wording:** keep as a rebalance reminder, reword, or switch off?

Neither predicts weaker markets.

HOUSEKEEPING **Delete the probe branch**; SEC contact secret now optional

13f.info covers the same filings.
