Market Monitor

Weekly review

Mon 26 Oct to Sun 1 Nov 2026 · prepared Sunday 1 November 2026

A reliable monitor, a weekly co-pilot, and a sober swing test

The alert chain ran **22 of 22 slots on time**. The Dashboard now opens with what the agreed plan says is due this week. A one-year backtest found **no edge in the swing rules**, so the recommendation is to keep swing on paper while it is tested live.

SLOTS ON TIME

22 / 22

All within 20 seconds since v2 went live on 27 Oct

MARKET REGIME

Nervous

F&G 26 (fear), S&P 500 3.1% off its high

SIGNALS LOGGED

6

Too early to score: each needs a week of trading

SWING EDGE

+0.04R

Random entry did +0.10R: no edge

WHAT SHIPPED

Built this week, and why

TUE **Monitor v2**: exact-time scheduler, safe stale data, regime headline, Research page

GitHub's cron ran about 5 hours late; the self-chaining scheduler fixed it.

THU **Index scanner, track record, score history, earnings reactions**

Covers all ~600 S&P 500 and FTSE 100 companies nightly; every alert is scored against what happened next.

FRI **Crash watch, Trends and Reviews pages**

Urgent alerts on 3% daily falls; AI, tech and growth themes tracked with a sector heatmap.

SUN **Plan this week** on the Dashboard, a **pullback-rule alert**, a browser-only **pots and goal** panel

Answers "what, if anything, should I do this week?" Personal values never leave the browser.

SUN **Swing paper-trading log** and a **one-year swing backtest**

Every clean setup is paper-traded and scored nightly, so swing has to prove itself.

FIX **Tight FTSE stops** were takeover-pinned prices, not bad data

DCC, Intertek, easyJet (and Bio-Techne, AES in the US) barely move while offers are pending. Now flagged and excluded.

RELIABILITY AND HEALTH

Every slot fired on time; nothing broken

CHECK	RESULT	NOTE
Weekday slots (27 to 30 Oct)	**21 / 21** on time	Commits 9 to 20 seconds after each slot; two new slots added Fri
Sunday digest	**On time** (18:00:19)	Includes the plan for the coming week from tonight
Overnight and weekend relays	**All succeeded**	The chain never needed GitHub's cron to restart it
Nightly index scan	3 runs, all succeeded	599 of 600 scored; 1 failure (VYLR, no data)
Health flag	**OK**	Prices 45 hours old at the weekend, within the 96-hour limit
Failed runs	1 Pages deploy (30 Oct)	Transient; the next deploy succeeded. Cancelled runs are the collision guard working

Mon 26 Oct still ran on the old, late system. US slots move an hour later in UK time from Monday; handled.

Fear without a dip; a tech sell-off on Friday

MARKETS

- **S&P 500** 7,580: week -0.6%, Fri -1.8%, **3.1% off its high** (6 Oct). Still 3.7% above its 200-day.
- **FTSE 100** 10,730: week +0.4%, month +2.9%, 1.7% off its high.
- **Fear & Greed 26** (fear), up from 17 a week ago. **VIX 19.4**, +12.9% on Friday.
- Friday: chips -7% (SMH), tech sector -4.3%. **Alphabet** -11.5% around results, **Meta** 13% off its high.
- Nikkei 12.5% and Hang Seng 16.7% off their highs.

ALERTS AND TRENDS

- **6 signals logged**: fear without a dip (26 Oct), Amazon and Nvidia long-term good entries, Microsoft, Visa and Shell swing setups.
- No buy tier, greed, trim or crash-watch alerts: nothing was close.
- **Leading themes (3 months):** healthcare innovation +20% (Eli Lilly +23% in a month), cybersecurity +14.5%.
- **Lagging:** AI infrastructure -7%, consumer fintech -4.5%, AI chips -19% this month with 0 of 12 in an uptrend.
- **Sectors:** energy +13.6% and health care +9% lead; real estate -7% and communication services -5.5% lag.

TRACK RECORD

Too early to judge: every signal needs a week of trading

DATE	SIGNAL	PRICE THEN	SINCE	VS S&P 500
26 Oct	Fear without a dip (S&P 500)	7,677	**-1.3%** (4 sessions)	0.0
29 Oct	Amazon long-term good entry	$243.79	**-1.4%** (1 session)	+0.4 pts
30 Oct	Nvidia long-term good entry	$204.64	Fri close	n/a
30 Oct	Microsoft, Visa, Shell swing setups	various	Fri close	n/a

Hit rates appear next week. A dip right after a fear signal is normal; judge at 1 to 3 months.

Banks lead the scan; swing rules need work

INDEX SCAN (FRI CLOSE)

- **20 full-score good entries**; top: **Lloyds 90**, Bank of Georgia, **Schwab 87**. New: Ameriprise.
- About 48 clean swing setups, mostly energy, staples and utilities (Valero, Devon, Shell, Exxon).
- Lloyds and NatWest score well but are still falling (26% off highs): stage any buying.

SWING BACKTEST (NOV 2025 TO OCT 2026)

- **3,804 trades**, 42% winners, **+0.04R** per trade (US +0.06R, UK -0.02R).
- Entering on any day with the same stops and targets did better: **+0.10R**.
- FX fees on US shares (~0.05R to 0.1R per trade) wipe out what edge there is.
- Moderate evidence: one rising year, today's index members only. Live paper log continues.

ISSUES AND RISKS

What could go wrong, honestly

SWING **The swing rules show no edge** over the past year

Retune and re-test against the random-entry baseline before any real money.

DATA **Results dates are missing** for some UK and US stocks

Yahoo has none for HSBC, Newmont and Constellation; the Dashboard says "no date known" instead of assuming none.

SIGNALS **Track record too young** to judge any signal

First numbers next week; meaningful ones from December.

OPS **US clocks changed today**

US slots now run an hour later in UK time. Tests cover the change; Monday's runs will confirm it.

NEXT WEEK'S BUILD

Building next

1. **Trade log (browser only)**
   Record each trade with the rule that triggered it, and show plan adherence.

2. **Swing retune**
   Test stricter setups (score 75+, uptrend, US only) against the random-entry baseline after FX costs.

3. **Smart-money tag**
   Congress disclosures and 13F holdings as a tracked tie-breaker, scored like any other signal.

4. **Sector-relative valuation**
   Judge P/E and EV/EBITDA against sector medians instead of fixed bands.

5. **Daily research and small builds at 08:33**
   Starting Monday 2 November.
